papyrus

Documents in HTML, printed to PDF

One element, one sheet, one page

Every element with the class `pdf-page` is one sheet on screen and one page in the PDF. `sheetCss()` sizes it to A4 or Letter.

```
import { SHEETS, sheetCss } from "@n-uf/papyrus";

const css = sheetCss(SHEETS.LETTER);  // US Letter sheets
```

Every PDF is checked

Three counts must agree. If they don't, the export stops instead of writing the file.

IN THE HTML	=	IN THE PDF	=	FROM YOU
The page elements	=	**Its own page count**	=	**The count you expect**
